Co-funded by the European Union

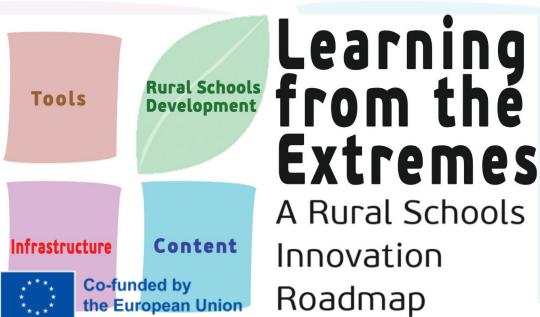

Learning from the Extremes

addresses the inequalities of access to digital education by enhancing inclusion and by reducing the "digital gap" suffered by school communities in remote areas with low connectivity, limited or no access to devices and digital educational tools and content.

- **Digital innovation** and **openness** in **remote schools** through self reflection.
- This is process offers a highly realistic view of the actual needs of our schools and in a rather dialogical way that offers constant reflection upon crucial aspects of schools as learning environments, as centres of innovation and as hubs of social engagement and responsibility.

The school's journey

Co-funded by the European Union

High-speed connectivity offers unique learning experiences to students by providing access to remote or virtual labs when such infrastructure is not available in the school environment or by bringing to life phenomena described in the schoolbooks. Students in rural areas can be supported by remote and virtual tutors when teachers of specific subjects (e.g., music) are missing. Students and schools can be supported to act as information hub for their community and collaborate with other schools and organisations (seismograph, network of schools).

Our vision

The School as Learning Hub of the Rural Community

- Introduces innovation in the classroom
- Creates an attractive environment for all
- Facilitates inclusion
- Effectively engages families, local communities, industry, experts, universities, research institutions, museums
- "Sees" itself as an ecosystem of (digital) innovation.

Thank you for your attention
